Programming Assignment 3 - Grading Criteria

1. Yes, my program compiles correctly.
2. My program mostly runs correctly. I think there are a few results that do not match the sample output. This may be due to incorrectly adjusting the data for splits.
3. My program takes 11 minutes to run.
4. I believe that there are a few results that do not match. When adjusting for the splits, I did so by interval rather than the entire industry. This may be resulting in incorrect data splits.
5. I think there are two reasons as to why my program takes so long to run. The first is that I have a query for every interval and for every company which means there are thousands of queries per industry. The second is that I write all the values to the database expect for the industry return which I then update in a separate query. In addition to the lengthy runtime, I feel that there are a few issues in terms of readability. There is a lot of extra classes and methods I created which make the program a bit hard to follow.
6. This assignment took me 16-17 hours
7.

Grading Criteria	Points	Expected Score
Correct output	33	30
Obeys constraints	2	2
Good design/style	2	1
Complete write up	1	1
Complies in less than 2 minutes and creates correct performance table	1.5	0.5
Correct filename	0.5	0.5
