Assignment 1

1) Yes, my program compiles correctly.

2) Yes, my program runs correctly as it matches the sample output provided.

3) Yes, I believe that all my code is working correctly.

4) No serious issues jump out to me with this program. One thing to note is that inputting a date range with incorrect format does not throw any error.

5) In terms of space complexity, when keeping a running average of a 50-day period, I create a second deque to store the previous 50 days rather than using the initial deque. I do not see this as an issue as the deque only has 50 elements.

6) This assignment took me roughly 12-13 hours (including figuring out how to compile correctly).

7)

Grading Criteria	Points	Expected Score
Correct output	30	30
Obeys constraints	4	4
Design/Style	2	1.5
Write up	2	2
Correct Format	1	1
Correct Filename	1	1
